SIP Trunking

SIP (Session Initiation Protocol) Trunking connects your business to the PSTN utilizing reliable and secure VoIP technology.

Your phone system + our connectivity and voice services

When voice and data communications are superior, your business has a decisive edge. Connect and secure all your phone systems to one next-generation SIP Trunking platform.

Plus, utilize Bring Your Own Cloud (BYOC) to connect with a contact center platform and host your data in the cloud.

More benefits, less costs

Centralize Locations & Phone Numbers	Geographic Redundancy
Resiliency & Scalability	24x7x365 Local Support
Business Continuity	SLA with Quality of Service
Capacity & Utilization Reporting	Guaranteed Uptime & 99.999% Reliability

The altafiber advantage

We are a one-stop-shop with over 150 years of connectivity experience. Whether 15 or 10,000+ call paths with your SBC or altafiber's SBC – our local experts will craft and deploy a customized plan for your business.

SIP with BYOC
(Bring Your Own Cloud)

Why altafiber vs. going to a cloud provider?
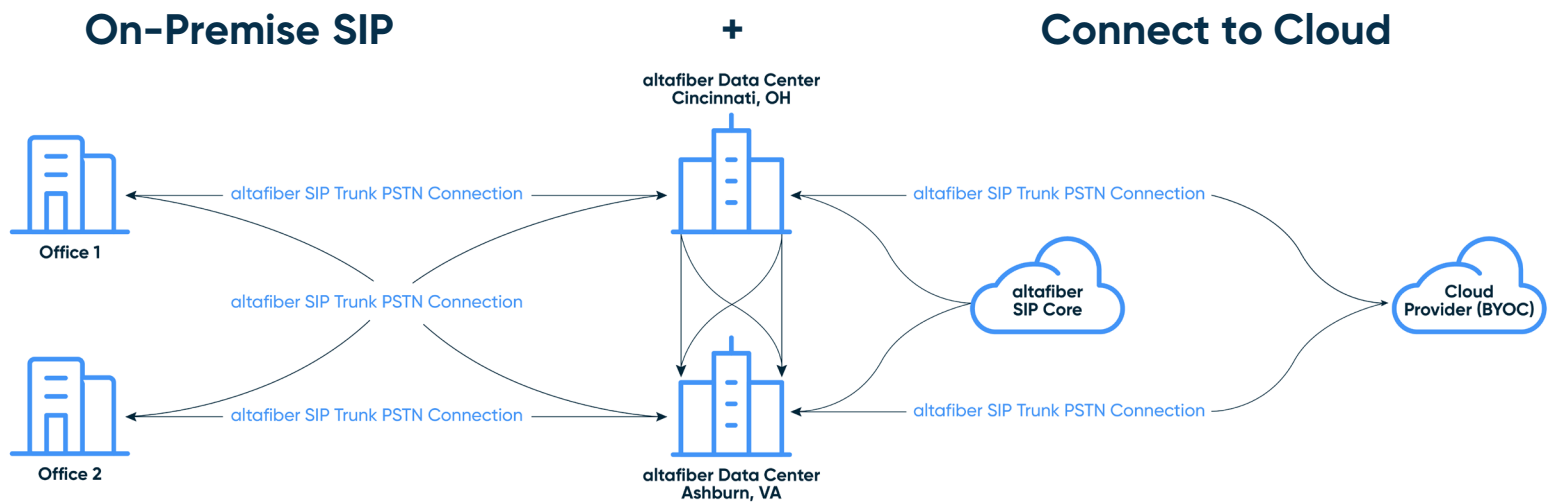

Know What You Are Signing Up For
Contact centers and cloud providers are *not* carriers. Cloud providers cannot guarantee redundancy with the carrier they choose for you. altafiber ensures a private network with a redundant SIP core backed by data centers in Cincinnati and Ashburn.

Know Who You Are Working With
If you are a current customer, you have already established a relationship with altafiber and can put a face to the name when calling about installation, reporting, or support.

Easy Add-On
Our engineers manage the installation and migration. Current customers can avoid technology migration clauses and an increase in rates. You can maintain your current SIP and dial plan functionality, with no porting involved.
